

E SAI KRISHNA

Engineering Lead · .NET & Distributed Systems · Agentic AI & RAG · AI-Native SDLC · 8+ Years

AWS Certified Developer – Associate · Claude Certified Architect

+91-9908866642 | krishnas1433@gmail.com | linkedin.com/in/ekrishnas | github.com/ekrishnas | Hyderabad

SUMMARY

Engineering Lead with 8+ years of experience in C#/.NET, Python, and cloud architectures, specializing over the past two years in embedding AI-driven software engineering across the full SDLC. At EPAM, established AI-native practices by deploying Claude Code with tailored plugins, skills, and slash commands. Delivered production-grade RAG and LLM API solutions verified through RAGAS frameworks. Standardized DORA-aligned metrics, cutting lead time from 2 weeks to 3 days, reducing MTTR from 3 days to 0.5 days, decreasing job failures by 30%, and lowering microservices migration errors by 40%. Mentored 16 engineers.

EXPERIENCE

EPAM Systems, Hyderabad

July 2024 - October 2026

Team Lead - Senior Software Engineer | AI SDLC Enablement, Agentic Automation & System Modernisation

- Led enterprise adoption of AI-augmented software development as the team standard — rolled out Claude Code with custom plugins, skills and slash commands, ran hands-on enablement on agentic coding workflows, and drove the team to AI Maturity Level 3, improving developer productivity by ~25%.
- Designed tool schemas and abstraction layers and deployed agentic SDLC automation agents for code generation, code review and test coverage using agent SDKs. Drove migration of 5+ legacy applications to .NET Core, using the AI SDLC pipeline to automate component-level conversion and improving reliability by ~35%.
- Owned the technical harness that validated AI-generated code: quality gates in GitHub Actions CI/CD (deployment time cut from hours to under 20 minutes), Verify end-to-end integration tests, editorconfig and static-analysis standards, build verification, Flyway migration checks in CI/Git hooks, secrets-guard hooks, and agent API observability on CloudWatch distributed tracing.
- Mentored 11 senior engineers & QA in .NET, system design and AI-native programming practices; partnered with the client architect and lead on AWS evaluation, cloud-native API modernisation and AI tooling strategy.

Team Lead - Software Engineering | Service Health Assessment - System Modernisation

- Built a RAG pipeline (Pinecone) grounding a tax agent in the internal knowledge base and documentation, enabling accurate Q&A and change-tracking — part of the GenAI hackathon solution, productionised as an internal Q&A tool for business analysts.
- Designed a Workflow Orchestration Platform (Hangfire) replacing the legacy batch system and executing thousands of jobs daily — retry policies, failure containment, idempotency guarantees and CloudWatch observability; reduced job failure rate 30% and eliminated manual intervention in 90% of scenarios. Added WebSocket notifications (25% server load reduction, sub-500ms UX).
- Led RCA on a WCF production outage through full recovery.

Senior Software Engineer | Corporate Tax Platform

- Authored the REST API modernisation design document for services handling 50K–100K requests/day — deterministic contracts, versioning, schema consistency and observability requirements targeting ~50% performance improvement; adopted as the team architectural standard.
- Performance profiling reduced page load 40% and AWS RDS + Lambda optimisation achieved 20% cost reduction.

ValueMomentum, Hyderabad

September 2019 - June 2024

Software Engineer/Senior Software Engineer | InsurTech Platform (Property & Casualty Insurance)

- Built RESTful and GraphQL APIs for Socotra PAS; automated quote pricing engine in under 5 seconds (80% manual review reduction); Stripe Payment Gateway integration; optimised document generation by 5+ seconds/document
- Proposed and implemented AWS infrastructure re-architecture resolving bulk quote conversion failures — 60% revenue increase within two quarters; designed DynamoDB-backed APIs with idempotency guarantees, rate controls, and tenant boundary enforcement at 99.9% availability SLA
- Orchestrated monolith-to-microservices migration with event-driven pub-sub (SNS/SQS) — 40% error reduction.
- Introduced GitHub Actions CI/CD across 5 services — 2 weeks → 3 days
- Automated batch job system saving 104 engineer-days/year; mentored 5 engineers (2 promoted to Senior)

HCLTech | Product Support Engineer — Google DFP

May 2017 - October 2017

- Tier-2 technical support for enterprise clients (Microsoft, Motorola, Samsung, Apple); JavaScript · HTML · CSS.

Tata Consultancy Services | Test Engineer – Contract

January 2016 - October 2016

- Automated regression suites with Selenium and NUnit in C#/.NET; regression coverage improved 60%.

CORE COMPETENCIES

Backend & API Engineering	Languages & Frameworks: C#, .NET, Python API Design & Protocols: RESTful API Design & Architecture, GraphQL, WebSockets, Event-Driven Communication, Microservices Architecture & Patterns: Distributed System Design, OOP, SOLID Principles, Design Patterns, Saga Pattern, Idempotency, Rate Controls
Data & Persistence	Relational & NoSQL: SQL Server, PostgreSQL, DynamoDB, AWS RDS, Flyway Migrations, Stored Procedures & Functions Optimization & Search: Schema Design, Query Optimization, Performance Profiling, Vector Databases (Pinecone, ChromaDB), Embeddings & Indexing
Cloud & Platform	Cloud Providers: AWS (Lambda, ECS, EC2, API Gateway, DynamoDB, RDS, S3, SNS/SQS, CloudWatch), Azure (Function Apps, Logic Apps, Service Bus, Blob Storage, Application Insights) DevOps & Observability: Docker, Serverless, Cloud-Native Patterns, Distributed Tracing, Datadog APM
Applied AI / LLM Engineering	LLM Integration & RAG: Claude/Anthropic, OpenAI, Azure OpenAI, RAG Pipelines, Chunking, Retrieval Design, Grounding, RAGAS Evaluations Frameworks & Guardrails: Prompt Engineering, Context Engineering, Guardrails, LangChain, LangGraph, Generative AI Delivery
Agentic Systems & Tooling	Agent Workflows: Agentic Workflows, AI Agents, Orchestrators, Subagents, Multi-Agent Systems SDKs & Automation: Agent SDKs, Tool Calling, Tool Schemas & Abstraction Layers, Model Context Protocol (MCP), Agent-Ready APIs, Autonomous Code-Generation, Review & Test Agents, Headless Automation, Agent Observability & Distributed Tracing
Engineering Standards & Delivery	CI/CD & Testing: GitHub Actions CI/CD, Git, Build Verification, xUnit, NUnit, Verify, Selenium, Static Analysis, EditorConfig, Strict Contracts Quality & Enablement: Quality Gates on AI-Generated Code, SAST/SCA, Secrets-Guard Hooks, IP & Code Privacy, AI-Assisted Coding Rollout (Claude Code, GitHub Copilot, Cursor), Adoption Metrics, DORA Metrics, Mentoring & Stakeholder Alignment

CERTIFICATIONS

Claude Certified Architect - Foundations — Anthropic	April 2026
AWS Certified Developer - Associate — Amazon Web Services	August 2025
AWS Certified AI Practitioner — Amazon Web Services	September 2025
Google Cloud: Generative AI Leader — Google Cloud	June 2025
AWS Partner: Technical Accredited — Amazon Web Services	August 2024
Certified Technical Interviewer — EPAM Systems	

EDUCATION

Bachelor of Technology – Electronics & Communications	2015
Keshav Memorial Institute of Technology —JNTU Hyderabad	

KEY ACHIEVEMENTS & RECOGNITION

- **Infrastructure & Modernization Impact:** Architected cloud resilience solutions driving a 60% revenue increase, modernized core monoliths to microservices.
- **Reliability & Delivery Velocity:** MTTR 3 days → 0.5 days, lead time 2 weeks → 3 days, job failure rate down 30%, manual intervention eliminated in 90% of scenarios — DORA-aligned across workflow orchestration and CI/CD.
- **Architectural Standard Adopted Team-Wide:** Authored the REST API modernisation design (deterministic contracts, versioning, schema consistency, observability requirements) for services at 50K–100K req/day; adopted as the team architectural standard.
- **Awards & Honors:** Received Client Hero (EPAM 2024), Delivery Excellence (EPAM 2025), and Highflier – Innovation (VM 2021) awards for exceptional client impact and technical delivery.
- **Enterprise AI Maturity:** Spearheaded transition to AI Maturity Level 3 by deploying agentic development workflows, custom Claude Code tooling, and production-grade RAG systems.
